Patient Bedside Physical Exam Rounds

On most Thursday afternoons, students will meet with resident or faculty members to examine patients at their bedsides.

- Come prepared to share at least one patient with the group. The more interesting the patients you select, the more interesting your rounds will be! For example: the patient may have an interesting finding, diagnosis, EKG, or film.
- Keep the diagnosis a secret from your fellow students if possible.
- We will visit patients as a group and have high quality and high quantity learning.
- Rounds will be with resident or experienced attending who will offer “bedside” wisdom.
- Rounds will last 1-2 hours depending upon number of patients.

Students may also practice listening to heart sounds on the Harvey cardiac simulator in the Simulation Center.
