Managing Nausea and Vomiting

Nausea (the feeling of being queasy or sick to your stomach) with or without vomiting (throwing up) can be caused by your cancer, chemotherapy, or radiation therapy. If caused by chemotherapy, nausea and vomiting can occur on the day you receive your treatment and can last for 3 or more days after your chemotherapy. If you are receiving radiation therapy, nausea and vomiting may start within 1 to 2 hours after receiving treatment to your chest, abdomen, or pelvis, and may last for several hours. Other causes of nausea and vomiting include intense pain, fatigue, illness, medications, and the stress of coping with cancer.

Feeling nauseous for a long time can affect your appetite and can cause you to lose weight. If you vomit a lot, you can get dehydrated and have other problems from losing body salts. To find an effective treatment for nausea and vomiting, you need to know what is causing the problem. Prescription medication is often needed to control nausea from chemotherapy and radiation therapy. Nausea from anxiety and fatigue can often be managed by using physical and mental relaxation techniques or by making a change in your diet. Effective treatment for nausea may be different for each person. Here are some suggestions to consider:

◆ Eating six to eight small meals a day, instead of three large meals, will make you more comfortable.
◆ To help remove bad tastes, rinse your mouth before eating with a solution made of 1 teaspoon of baking soda, ¾ teaspoon of salt, and 1 quart of warm or cool water.
◆ Bland foods and foods served cool or at room temperature may be easier to eat than hot and spicy foods.
◆ Foods that are very sweet, fatty, greasy, or spicy can aggravate nausea.
◆ Create a peaceful eating place, if possible. A relaxed atmosphere will help calm you and make eating easier. The room should be well ventilated and not smell of strong food or cooking odors.
◆ Sip fruit juices, sports drinks, or flat soda pop throughout the day. This will help you get enough calories, nutrients, and fluids.
◆ Hard candies, such as peppermints, lemon drops, and root beer barrels, can relieve nausea and get rid of the bad taste in your mouth.
◆ If you are vomiting, dehydration is a serious concern. While it may be very difficult, you need to drink clear liquids as often as possible during this time. After a bout of vomiting, rinse your mouth and spit out the water. Try not to drink for 30 minutes; then try to consume sips of apple juice, cranberry juice, flat soda pop, broth, or bites of frozen flavored ice.

Medication Advice

◆ Do not hesitate to ask for anti-nausea medication; there are excellent options for relief. It is important to follow the instructions on the bottle. Take the medication as often and as long as you need it. Do not wait until you are nauseated! If your nausea persists, tell your doctor. Another medication may be more effective.
◆ Do not take medications on an empty stomach unless your doctor or pharmacist tells you to! This is a recipe for disaster. Having something in your stomach will help control your nausea. Eat dry foods, such as crackers, toast, dry cereal, or bread sticks, when you wake up and every few hours during the day.
Strong odors can cause nausea

If you are in the hospital, remember to open the cover on the food tray away from you, rather than toward you. This will carry the food smell away and not into your face. Also, ask friends, family members, and any visitors (including those on your health care team) to avoid wearing perfume, aftershave, and scented body lotions. Encourage cleaning help to avoid strong-smelling cleaning agents and room fresheners.

Recipe

Cantaloupe and Chicken Salad*

¼ cup plain yogurt
¼ cup mayonnaise or salad dressing
1 tablespoon fresh lemon juice
1 tablespoon chopped fresh chives
¼ teaspoon salt
5 cups of cantaloupe, cut into 1-inch squares
2½ cups cut-up chicken
1 cup red or green grapes, cut in half
1 medium cucumber, cut into 1-inch bite-sized strips

Mix yogurt and mayonnaise in large bowl. Stir in lemon juice, chives and salt. Stir in remaining ingredients. Serve immediately, or refrigerate until chilled (at least 2 hours). Store no longer than 24 hours.

## Food Lists

### Foods for Intense Nausea (Day of Therapy)

This list is very restrictive; do not limit yourself to these foods for more than 1 to 2 days.

<table>
<thead>
<tr>
<th>Recommended</th>
<th>Foods That May Cause Nausea</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Protein group</strong></td>
<td></td>
</tr>
<tr>
<td>Juice-type commercial protein supplements (for example, Enlive™)</td>
<td>All others</td>
</tr>
<tr>
<td><strong>Breads, cereals, rice, and pasta</strong></td>
<td></td>
</tr>
<tr>
<td>Dry toast, saltines, rice</td>
<td>All others</td>
</tr>
<tr>
<td><strong>Fruits and vegetables</strong></td>
<td></td>
</tr>
<tr>
<td>Apple, cranberry, and grape juice</td>
<td>All others</td>
</tr>
<tr>
<td><strong>Beverages, desserts, and miscellaneous</strong></td>
<td></td>
</tr>
<tr>
<td>Ginger ale; caffeine-free and noncarbonated drinks, such as fruit punch and sports drinks; ginger and chamomile tea; ice pops, fruit ice, sherbet, and flavored gelatin; pretzels</td>
<td>All others</td>
</tr>
</tbody>
</table>

### Foods for Managing Nausea and Vomiting on Other Days

<table>
<thead>
<tr>
<th>Recommended</th>
<th>Foods That May Cause Distress</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>High-protein foods</strong></td>
<td></td>
</tr>
<tr>
<td>Boiled or baked meat, fish, and poultry; cold meat or fish salad; eggs; cream soups made with low-fat milk; luncheon meat; lean ham; nonfat yogurt</td>
<td>Fatty and fried meats, fried eggs, sausage, milkshakes (unless made with low-fat milk or ice milk)</td>
</tr>
<tr>
<td><strong>Breads, cereals, rice, and pasta</strong></td>
<td></td>
</tr>
<tr>
<td>Saltines, soda crackers, bread, toast, cold cereal, English muffins, bagels, plain noodles, rice</td>
<td>Doughnuts, pastries, waffles, pancakes, muffins</td>
</tr>
<tr>
<td><strong>Fruits and vegetables</strong></td>
<td></td>
</tr>
<tr>
<td>Potatoes (baked, boiled, or mashed), vegetable juices, canned or fresh fruits, vegetables as tolerated (omit if appetite is poor or nausea is severe)</td>
<td>Potato chips, french fries, creamed or fried potatoes or vegetables</td>
</tr>
<tr>
<td><strong>Beverages, desserts, and miscellaneous</strong></td>
<td></td>
</tr>
<tr>
<td>Cold fruit drinks, caffeine-free soda pop and iced tea, sports drinks, angel food cake, sponge cake, flavored gelatins, vanilla wafers, pudding (made with low-fat milk), ice pops, juice bars, fruit ices</td>
<td>Alcohol, coffee, tea</td>
</tr>

Nausea and Vomiting Decision Tree*

If You Are Nauseated and/or Vomiting and

- Are constipated or straining to pass stool,
  - Use tip sheet for constipation.
  - If these tips don’t work for you after 2 days,
    - Call your doctor.

- Have flu-like symptoms such as fever or achiness,
  - Drink clear liquids and
    - If these tips don’t work for you,
      - Try tip sheet for nausea.

- Have acute or severe pain,
  - Try tip sheet for nausea.
  - If these tips don’t work for you,
    - Call your doctor.

- Receive chemotherapy, radiation therapy, or both,
  - Try tip sheet for nausea.

- Have started taking a new medication or a new dosage,
  - Try tip sheet for nausea.
  - If these tips don’t work for you,
    - Call your doctor.

- Are coughing,
  - Use physician-approved cough medicine.
