Breakthrough 2.0 focuses on data and analytics

Last week, we examined Breakthrough 1.0 in detail. Today, we will shift our focus to Breakthrough 2.0.

Breakthrough 2.0 focuses on utilizing data and analytics to advance Prisma Health’s clinical, operational, financial and strategic imperatives. It involves gathering significant amounts of data from across the organization and turning it into advanced analytics to inform critical decisions.

Some results expected to come from the second Breakthrough include:

- Creating a single request and fulfillment process for data, analytics, and reports
- Compiling a data glossary with a set of defined terms
- Establishing visualization standards to achieve a consistent look and feel when reporting data

All efforts ultimately fall into one of four supporting strategies:

- Requests, glossary and reports (Led by Keith Shah, PhD, VP, Data and Analytics)
- Data models (Led by Mark Wess, MD, VP, Chief Health Information Executive)
- Stewardship and data integrity (Led by Andy Ferguson, VP, Financial Planning and Business Intelligence)
- Infrastructure and scale (Led by John Supra, VP, Solutions and Services, Care Coordination Institute)

This serves as the final introductory article about the Breakthrough Strategies. However, we will continue to provide you with updates as we continue to utilize all eight Breakthrough Strategies to transform our organization and bring our purpose to life: Inspire health. Serve with compassion. Be the difference.
